About Our Project:

Welcome to our project documentation! This document provides an overview of our project, its goals, features, and technical details. We hope this guide will help you understand our project and its implementation.

Project Description:

Our project is a web-based platform designed to connect freelancers with potential clients, facilitating the hiring process and promoting collaboration. It aims to provide a seamless experience for both freelancers and clients, offering a wide range of features and functionalities to support their needs.

Key Features:

1. User Registration and Authentication: Users can create accounts, log in, and access personalized profiles.
2. Freelancer Profile Creation: Freelancers can create detailed profiles, showcasing their skills, experience, and portfolio.
3. Job Posting and Search: Clients can post job opportunities, and freelancers can search and apply for available jobs.
4. Ratings and Reviews: Users can rate and review freelancers and clients based on their experience.
5. Reporting System: Users can report issues, ensuring a safe and reliable environment for everyone.

Technologies Used:

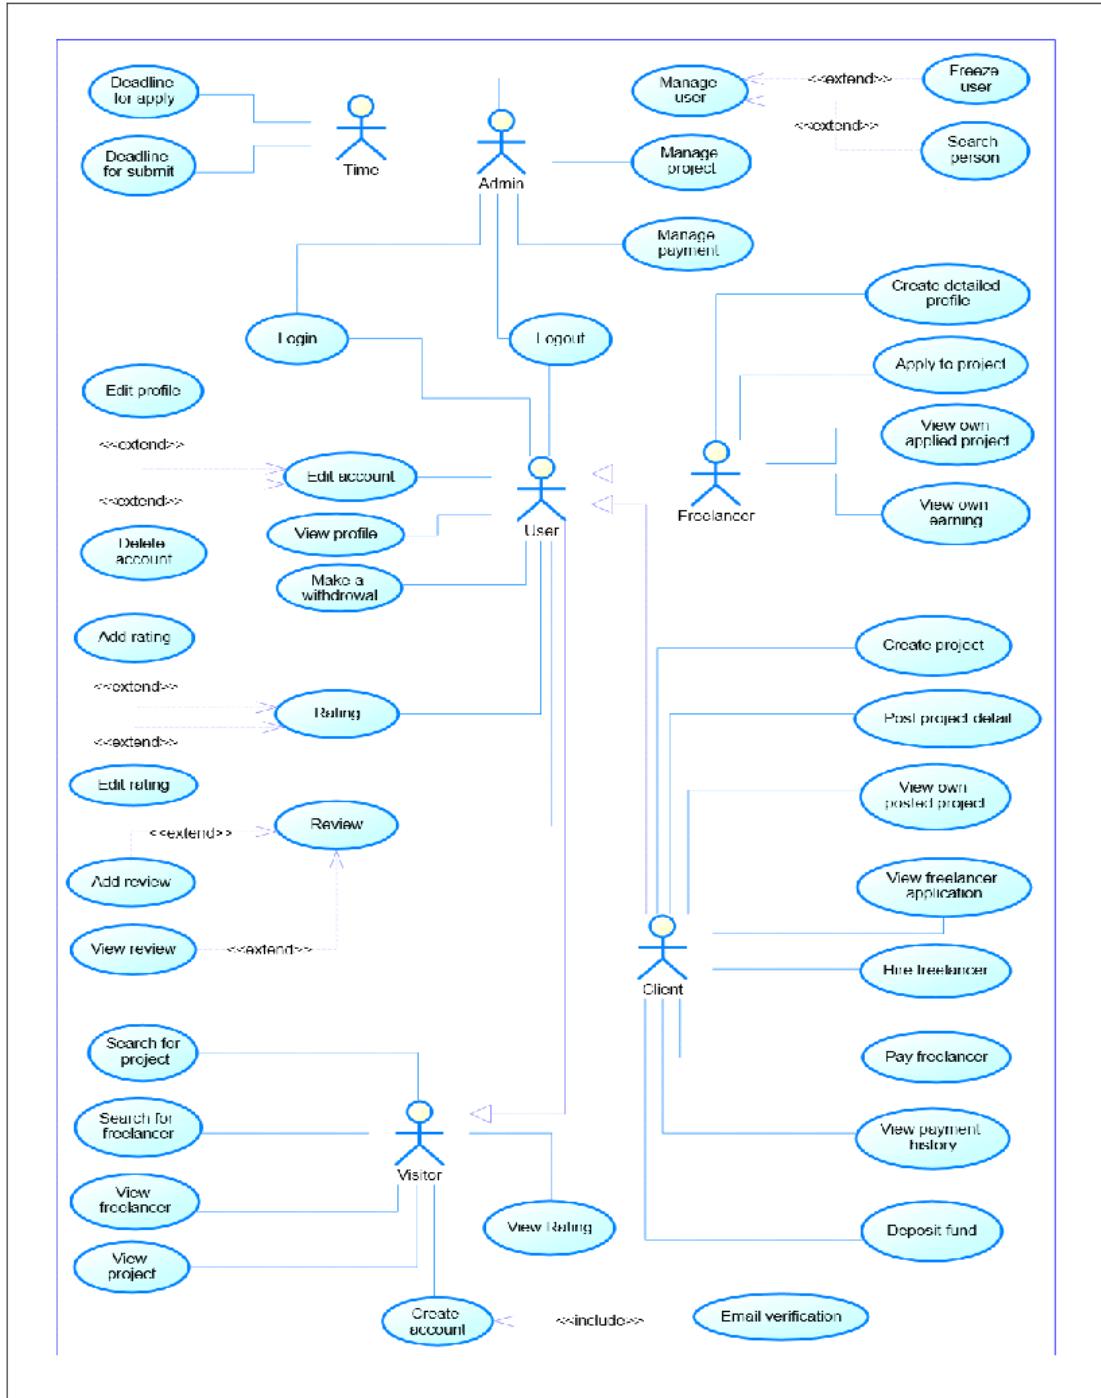

Our project is developed using modern web technologies and frameworks, including:

1. Front-end: Angular, HTML, CSS, and TypeScript.
2. Back-end: Laravel PHP framework, MySQL database.
3. RESTful APIs: Communication between the front-end and back-end is handled through RESTful APIs.
4. Authentication and Security: Token-based authentication and secure data transmission using HTTPS.

Contact Us:

If you have any questions, feedback, or issues regarding our project, please don't hesitate to contact our support team. We value your input and are committed to providing the best possible experience for our users.

USECASE DIAGRAM

NARATIVE USECASE

LOGOUT

Use-Case Name:	logout	
Use-Case ID:	logout-01	
Priority:	Medium	
Primary Actor:	User, admin	
Description:	User will logout from the System.	
Precondition:	Being logged in.	
Trigger:	To-logout.	
Typical Course of Events:	Actor Action	System Response
	-User will click on the Logout button	-Logout User from the system by deleting the access token from the database.
Alternate Courses:	Not click the Logout button.	
Conclusion:	The user is logged out of the system.	
Post-condition:	User get redirected to the login page.	

CREATE ACCOUNT

Use-Case Name:	Create account	
Use-Case ID:	Create-account-02	
Priority:	High	
Primary Actor:	Visitor	
Description:	This use case is used to create new account as a freelancer or client.	
Precondition:	New and valid Email Address	
Trigger:	To create new account	
Typical Course of Events:	Actor Action	System Response
	-Enter details	-check validation.
	-Create account	-save account in database.
	-validate email address by pressing on the send link or entering numbers that are sent	-send Authentication token to the user.
Alternate Courses:	If the email is not valid or already exist in the database then system will tell user and will not save the information's in the database.	
Conclusion:	A new account will be created	
postcondition	The user can now log in to the system using their registered email address and password.	

LOGIN

Use-Case Name:	login	
Use-Case ID:	login-03	
Priority:	High	
Primary Actor:	User, Admin	
Description:	This use case is used to log in with existing account	
Precondition:	Having a valid account	
Trigger:	To login	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -Enter username and password. -Click on the login button. 	<ul style="list-style-type: none"> -The system verifies the username and password. -If the username and password are correct, the system logs the user into the system and send Auth Token. -The system displays an error message if the username and password are incorrect.
Alternate Courses:	If the user forgets their password, they can click on the "forgot password" link. The system will then ask for the user's email address, and send a password reset link to their email. The user can then follow the link to reset their password.	
Conclusion:	The user is logged into the system.	
postcondition	The user has access to their account and can perform various actions based on their account type.	

EMAIL VERIFICATION

Use-Case Name:	Email Verification	
Use-Case ID:	Email_Verification-04	
Priority:	High	
Primary Actor:	Visitor	
Description:	This use case is used to verify an email.	
Precondition:	Sending an email with the register.	
Trigger:	Verify the email.	
Typical Course of Events:	Actor Action	System Response
	-fill the registration form. -write the code received from email.	-send a code for the email. -waiting to receive the same code from the visitor.
Alternate Courses:	If the code that was send doesn't be send back by the visitor the it will cancel the registration process.	
Conclusion:	The Email owner will be confirmed.	
Post-condition:	The Email will be saved in the database.	

VIEW PROJECTS

Use-Case Name:	View Projects	
Use-Case ID:	View Projects-05	
Priority:	Medium	
Primary Actor:	Visitor	
Description:	The visitor will view the recruiter's posted jobs.	
Precondition:	<ul style="list-style-type: none"> -Have internet. -Visit the website. 	
Trigger:	View the posts in the website.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -Navigate to the "Projects" page. -View the Category of posted projects. -Click on a project to view its details. -View the project's details, such as its description, requirements, budget, and deadline. 	<ul style="list-style-type: none"> -send the latest post's information.
Alternate Courses:	None	
Conclusion:	The Email owner-View the list of posted projects and their details.er will be confirmed.	
Post-condition:	The visitor is still not logged in to the system, and therefore cannot bid on or apply for any of the projects. They can, however, choose to create an account and log in to the system in order to bid on or apply for projects that they are interested in.	

SEARCH FOR PROJECT

Use-Case Name:	Search for project	
Use-Case ID:	Search for project-06	
Priority:	Medium	
Primary Actor:	Visitor	
Description:	This use case is used by any visitor to search for specific projects on the freelancing website.	
Precondition:	<ul style="list-style-type: none"> -Have the internet. -Visit the website. 	
Trigger:	The visitor wants to search for specific projects.	
Typical Course of Events:	<p>Actor Action</p> <ul style="list-style-type: none"> -Navigate to the "Projects" page. -choose the category. -Enter keywords or specific project details into the search bar. -Click on the "search" button. -View the list of projects that match the search criteria. -Click on a project to view its details. 	<p>System Response</p> <ul style="list-style-type: none"> -send projects with searched tags.
Alternate Courses:	If there are no projects that match the search criteria, the system displays a message indicating that there are no results found.	
Conclusion:	The visitor is able to search for and view specific projects that match their search criteria.	
Post-condition:	The visitor is still not logged in to the system, and therefore cannot bid on or apply for any of the projects. They can, however, choose to create an account and log in to the system in order to bid on or apply for projects that they are interested in.	

VIEW FREELANCER

Use-Case Name:	View Freelancer	
Use-Case ID:	View_Freelancer-07	
Priority:	Medium	
Primary Actor:	Visitor	
Description:	This use case is used to view the profile of a specific freelancer on the freelancing website.	
Precondition:	<ul style="list-style-type: none"> -Have the internet. -Visit the website. 	
Trigger:	To view the profile of a specific freelancer.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -Search for the freelancer by name or skill set. -Click on the freelancer's name or profile picture. -View the freelancer's profile, including their name, profile picture, skill set, work experience, education, and ratings/reviews. 	<ul style="list-style-type: none"> -send the latest freelancer's information.

Conclusion:	The Email owner will be confirmed.	
Post-condition:	The Email will be saved in the database.	

SEARCH FOR FREELANCER

Use-Case Name:	Search for freelancer	
Use-Case ID:	Search for freelancer-08	
Priority:	Medium	
Primary Actor:	Visitor	
Description:	This use case is used by any visitor to search for specific freelancer on the freelancing website.	
Precondition:	<ul style="list-style-type: none"> -Have the internet. -Visit the website. 	
Trigger:	To search for a specific freelancer on the freelancing website based on specific criteria.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -Navigate to the "Freelancers" page. -choose the category. -Enter keywords or specific project details into the search bar. -Click on the "search" button. -View the list of freelancers that match the search criteria. -Click on a freelancer to view his/her details. 	-send freelancers with searched skills.
Alternate Courses:	If there are no freelancers that match the search criteria, the system displays a message indicating that there are no results found.	
Conclusion:	<p>The visitor is able to search for and view specific freelancer that match their search criteria.</p> <p>Must be client to contact the freelancer.</p>	
Post-condition:	The client can choose to contact the freelancer to discuss potential projects, or to invite the freelancer to bid on an existing project.	

RATING

Use-Case Name:	Rating	
Use-Case ID:	Rating-00	
Priority:	Low	
Primary Actor:	User	
Description:	User can rate another user after the job done.	
Precondition:	Having a completed project	
Trigger:	To	
Typical Course of Events:	Actor Action	System Response
	-Enter details -Create account -validate email address by pressing on the send link or entering numbers that are sent	-check validation -save account in database
Alternate Courses:	If details are invalid then system will tell user and will not save the information's in the database.	
Conclusion:	A new account will be created	
Post-condition:	User won't be able to create another account using the same email	

ADD RATING

Use-Case Name:	Add Rating	
Use-Case ID:	Add Rating-09	
Priority:	Low	
Primary Actor:	User	
Description:	This use case is used to add rating for different user.	
Precondition:	The freelancer or client has completed a project with the other party and is logged in to the system.	
Trigger:	The freelancer or client wants to rate the other party based on their experience working together on the project.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -Navigate to the project page or dashboard. -Find the completed project and click on the "rate" button next to the other party's name. -Enter a rating on a scale of 1-5, with optional comments or feedback. -Click on the "submit" button. 	<ul style="list-style-type: none"> -Store this rating information in the database.
Alternate Courses:	If the project has not yet been completed, the system displays a message indicating that ratings cannot be submitted until the project is completed.	
Conclusion:	The freelancer or client is able to rate the other party based on their experience working together on the project.	
Post-condition:	The rating and feedback are saved in the system and is visible to other users who view the freelancer's or client's profile. The rated party is notified that they have received a rating and feedback from the other party. The system may use the ratings to calculate an overall rating or score for the freelancer or client.	

EDIT RATING

Use-Case Name:	Edit Rating	
Use-Case ID:	EditRating-10	
Priority:	Medium	
Primary Actor:	User	
Description:	This use case is used by a freelancer or client to edit a rating that they previously submitted for the other party.	
Precondition:	The freelancer or client has previously submitted a rating for the other party and is logged in to the system.	
Trigger:	The freelancer or client edits the rating they previously submitted.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -Navigate to the project page or dashboard. -Find the completed project and click on the "edit rating" button next to the other party's name. -Edit the rating on a scale of 1-5, with optional comments or feedback. -Click on the "submit" button. 	-update the existed rating information.

Conclusion:	<p>User can edit his/her profile.</p>	
Post-condition:	<p>The account information will be updated.</p>	

DELETE ACCOUNT

Use-Case Name:	Delete account	
Use-Case ID:	Delete account-15	
Priority:	Medium	
Primary Actor:	User	
Description:	This use case is used by a user to delete their account from the system.	
Precondition:	The user is logged in to the system and has the necessary permissions to edit their profile	
Trigger:	The user wants to permanently delete their account.	
Typical Course of Events:	Actor Action -Navigate to the account settings page. -Click on the "delete account" button. -Confirm the deletion by entering their password or other identifying information. -Click on the "delete" or "confirm" button.	System Response -If the identity information is valid the account will be deleted from the database. -if not delete process will be rejected.
Alternate Courses:	If the user decides not to delete their account, they can cancel the deletion process by clicking on the "cancel" or "back" button.	
Conclusion:	The user is able to delete their account from the system.	
Post-condition:	All associated data (such as project history, ratings, and feedback) is permanently removed from the system.	

MANAGE PROJECT

Use-Case Name:	Manage Project					
Use-Case ID:	Manage Project-16					
Priority:	High					
Primary Actor:	Admin					
Description:	<p>This use case is used by the admin to manage projects on the freelancing website, including creating new projects, editing existing projects, and deleting projects.</p>					
Precondition:	<p>The admin is logged in to the system and has the necessary permissions to manage projects.</p>					
Trigger:	<p>The admin wants to manage a project on the freelancing website.</p>					
Typical Course of Events:	<table border="1"> <thead> <tr> <th>Actor Action</th> <th>System Response</th> </tr> </thead> <tbody> <tr> <td> <ul style="list-style-type: none"> -Select the project to manage. -Edit the project details, such as project description, budget, deadline, or other information. -or delete the entire project. -Click on the "save" or "update" button. </td> <td> <ul style="list-style-type: none"> -Update the post information in the database. </td> </tr> </tbody> </table>	Actor Action	System Response	<ul style="list-style-type: none"> -Select the project to manage. -Edit the project details, such as project description, budget, deadline, or other information. -or delete the entire project. -Click on the "save" or "update" button. 	<ul style="list-style-type: none"> -Update the post information in the database. 	
Actor Action	System Response					
<ul style="list-style-type: none"> -Select the project to manage. -Edit the project details, such as project description, budget, deadline, or other information. -or delete the entire project. -Click on the "save" or "update" button. 	<ul style="list-style-type: none"> -Update the post information in the database. 					
Alternate Courses:	None					
Conclusion:	<p>The admin is able to manage projects on the freelancing website, including editing existing projects, and assigning projects to freelancers or teams of freelancers.</p>					
Post-condition:	<p>The updated project information is saved in the system and is visible to other users who view the project details. If the project is deleted, all associated data (such as freelancer or team of freelancers assigned to the project, project history, ratings, and feedback) is permanently removed from the system.</p>					

MANAGE PAYMENT

Use-Case Name:	Manage Payment	
Use-Case ID:	Manage Payment-17	
Priority:	High	
Primary Actor:	Admin	
Description:	This use case allows the admin to manage the payment of projects and freelancers.	
Precondition:	The admin has access to the system and is logged in.	
Trigger:	The admin chooses to manage the payment.	
Typical Course of Events:	Actor Action	System Response
	-Admin selects "Manage Payment" from the admin dashboard.	-System displays the payment details and options to manage payment.
	-System displays a list of ongoing projects and freelancers.	-System processes the selected payment option and updates the payment status.
	-Admin selects a project or a freelancer to manage payment.	-System sends a notification to the concerned parties (e.g., freelancer, client) regarding the payment -status update.
	-Admin selects a payment option (e.g., approve, decline, refund).	
Alternate Courses:	-If the admin encounters any issues with the payment processing, the system displays an error message and suggests contacting the technical support team.	
Conclusion:	The admin manages the payment of a project or a freelancer, and the payment status is updated accordingly.	
Post-condition:	The concerned parties (e.g., freelancer, client) are notified of the payment status update, and the payment information is updated in the system.	

MANAGE USER

Use-Case Name:	Manage User	
Use-Case ID:	Manage User-18	
Priority:	High	
Primary Actor:	Admin	
Description:	This use case allows the admin to manage users, including searching for a user and freezing a user account.	
Precondition:	The admin has access to the system and is logged in.	
Trigger:	The admin chooses to manage a user.	
Typical Course of Events:	Actor Action	System Response
	-selects "Manage User" from the admin dashboard.	-displays a search bar to search for a user.
	-enters the user's information and selects "Search".	-The system displays a list of users that match the search criteria.
	-selects a user from the list to manage.	-The system displays the user's details and options to manage the user account.
	-selects a user account option (e.g., freeze, unfreeze, delete).	-The system processes the selected user account option and updates the user account status.
Alternate Courses:	-If the admin encounters any issues with the user account processing, the system displays an error message and suggests contacting the technical support team.	
Conclusion:	The admin manages a user account, and the user account status is updated.	
Post-condition:	The concerned user is notified of the user account status update, and the user account information is updated in the system.	

CREATE DETAILED PROFILE

Use-Case Name:	Create detailed profile	
Use-Case ID:	Create-profile-19	
Priority:	High	
Primary Actor:	freelancer	
Description:	This use case allows a freelancer to create a detailed profile that highlights their skills and experience.	
Precondition:	The freelancer is registered and logged in.	
Trigger:	The freelancer chooses to create a detailed profile.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -selects "Create Detailed Profile" from their dashboard. -Freelancer fills out the data (name, skills, experience, education, etc...) and uploads their resume and portfolio. -Freelancer selects "Submit" to save the profile. 	<ul style="list-style-type: none"> -The system verifies the uploaded information and displays a preview of the profile for the freelancer to review. -The system saves the profile in the database and sends a confirmation message to the freelancer.
Alternate Courses:	If the freelancer encounters any issues with the form or uploads, the system displays an error message and suggests to try again.	
Conclusion:	The freelancer creates a detailed profile that shows their skills and experience.	
Post-condition:	The freelancer's profile is saved in the system and can be viewed by clients.	

APPLY TO PROJECT

Use-Case Name:	Apply to project	
Use-Case ID:	Apply-20	
Priority:	High	
Primary Actor:	freelancer	
Description:	This use case allows a freelancer to apply for a project posted by a client.	
Precondition:	The freelancer is registered and logged in.	
Trigger:	The freelancer chooses to apply for a project.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> -Apply to an available project. -Freelancer fills out the data (name, skills, experience, education, etc...) and uploads their resume and portfolio. -Reviews the project details and confirms that they meet the project requirements. 	<ul style="list-style-type: none"> -The System displays the project details, including the project description, skills required, budget, and other relevant information. -The system sends the proposal message to the client. -The system updates the freelancer's applied projects list.
Alternate Courses:	If the freelancer already applied for the project, the system displays an error message.	
Conclusion:	The freelancer applies for a project by sending a proposal message to the client.	
Post-condition:	The freelancer's proposal message is sent to the client, and the freelancer's applied projects list is updated in the system.	

VIEW OWN APPLIED PROJECT

Use-Case Name:	View own applied project	
Use-Case ID:	Applied-Projects-21	
Priority:	Medium	
Primary Actor:	freelancer	
Description:	This use case allows a freelancer to view their own applied projects list.	
Precondition:	The freelancer is registered and logged in.	
Trigger:	The freelancer chooses to view their applied projects.	
Typical Course of Events:	Actor Action	System Response
	-selects a project from the list to view more details.	<ul style="list-style-type: none"> -The system displays a list of the freelancer's applied projects, including the project details and application status. -The system displays the project details and the proposal message sent to the client.
Alternate Courses:	If the freelancer has never applied to a project, nothing will appear.	
Conclusion:	The freelancer can view his proposals to the projects.	
Post-condition:	The freelancer will get the details for his applications.	

Use-Case Name:	View own earning	
Use-Case ID:	View-earning-22	
Priority:	Medium	
Primary Actor:	freelancer	
Description:	This use case is used by the freelancer to view their earning history on the website.	
Precondition:	The freelancer is registered and logged in.	
Trigger:	To view earning history.	
Typical Course of Events:	Actor Action	System Response
	-select his earning process from the earning history list.	-The system will display the earning history and details that was stored in the data base
Alternate Courses:	If the freelancer doesn't earn any money yet, the earning history will be empty.	
Conclusion:	The freelancer can view earning.	
Post-condition:	The client will be able to track their earning progress.	

VIEW OWN EARNING

DEADLINE FOR APPLY

Use-Case Name:	Deadline for apply	
Use-Case ID:	Deadline-for-apply-23	
Priority:	medium	
Primary Actor:	Time	
Description:	This use case is used to set the last time for the freelancer to apply for the project	
Precondition:	The freelancer is registered and logged in.	
Trigger:	The freelancer chooses to apply for a project.	
Typical Course of Events:	Actor Action	System Response
	-Freelancer check for the deadline for applying	-System show it.
Alternate Courses:	If freelancer attempts to apply for the project after the deadline has passed, the system displays an error message.	
Conclusion:	This use case allows the system set a deadline for freelancer to apply for a project.	
Post-condition:	Once the deadline for applying has end, the system will notify the client of all the received applications and allow them to select a freelancer.	

DEADLINE FOR SUBMIT

Use-Case Name:	Deadline for submit	
Use-Case ID:	Deadline-for-submit-24	
Priority:	medium	
Primary Actor:	Time	
Description:	This use case shows the last time for the freelancer to submit the project	
Precondition:	The freelancer is registered and logged in.	
Trigger:	The freelancer applied for this project.	
Typical Course of Events:	Actor Action	System Response
	-freelancer checks the deadline for submission.	-the deadline for submission will appear.
Alternate Courses:	If the freelancer didn't submit on time, the system doesn't accept the project.	
Conclusion:	The freelancer must submit his work before the specified time.	
Post-condition:	If freelancer submits the project before the deadline, the system will accept it, else the system will reject it.	

CREATE PROJECT

Use-Case Name:	Create project	
Use-Case ID:	Create-project-25	
Priority:	medium	
Primary Actor:	Client	
Description:	This use case is used to post new project by the clients.	
Precondition:	The client is registered and logged in.	
Trigger:	The client chooses to post a project.	
Typical Course of Events:	Actor Action	System Response
	-enter project detail. -post the project.	-view the project for the freelancers.
Alternate Courses:	The client can post many projects.	
Conclusion:	This use case allows client to easily post new projects.	
Post-condition:	The admin accepts the project to be posted, and a notification will send for the client that their project has been accepted.	

POST PROJECT DETAILS

Use-Case Name:	Post project details	
Use-Case ID:	Post-project-detail-26	
Priority:	medium	
Primary Actor:	Client	
Description:	This use case allows the client to add project details before submitting the project. The client can enter all the relevant information about the project.	
Precondition:	The client is registered and logged in.	
Trigger:	The client chooses to post a project and clicks on the "Add Project Details" button.	
Typical Course of Events:	Actor Action	System Response
	<ul style="list-style-type: none"> - clicks on "Add Project Details" button. - enters project details. -submits the project with details. 	<ul style="list-style-type: none"> - displays a form to enter project details. - validates the details and allows the client to proceed. - displays a confirmation message.
Alternate Courses:	If the client does not provide all the required details, the system displays an error message and prompts the client to complete the missing fields.	
Conclusion:	This use case helps to ensure that the project details are complete and accurate before the project is submitted.	
Post-condition:	Once the client submits the project with details, the system saves the project details and prepares to display the project to potential freelancers.	

View own posted project

Use-Case Name:	View own posted project	
Use-Case ID:	View-own-posted-project-27	
Priority:	low	
Primary Actor:	Client	
Description:	This use case allows the client to view the projects that they have posted on the platform.	
Precondition:	The client is registered and logged in.	
Trigger:	The client chooses to view their posted project.	
Typical Course of Events:	Actor Action	System Response
	-choose to view the project he posts.	- displays a list of all the projects that the client has posted.
Alternate Courses:	If the client has not posted any projects, the system displays a message stating that the client has no posted projects.	
Conclusion:	This use case enables the client to keep track of the projects they have posted and make any necessary changes to the project details.	
Post-condition:	Once the client has finished reviewing the posted project, the system returns to the list of posted projects.	

View freelancer application

Use-Case Name:	View freelancer application	
Use-Case ID:	View-freelancer-application-28	
Priority:	medium	
Primary Actor:	client	
Description:	This use case enables the client to view the list of freelancers who have applied for their posted project.	
Precondition:	The client is registered and logged in.	
Trigger:	The client chooses to view the freelancer applications for their posted project.	
Typical Course of Events:	Actor Action	System Response
	-view applications. -select freelancer. -reviews the freelancer's application details.	-display a list of all freelancer application who have applied for the project. -displays the freelancer's application details. -allow to accept or reject application.
Alternate Courses:	If no freelancers have applied for the project, the system displays a message stating that there are no applications for the project.	
Conclusion:	This use case provides the client with an easy way to manage the freelancer applications for their posted project.	
Post-condition:	The client may choose to accept or reject one or more freelancer applications.	

Hire freelancer

Use-Case Name:	Hire freelancer	
Use-Case ID:	Hire-freelancer-29	
Priority:	medium	
Primary Actor:	Client	
Description:	This use case allows the client to hire a freelancer for their project from the list of applications received.	
Precondition:	The client is registered and logged in.	
Trigger:	The client has reviewed the list of freelancer applications and decided to hire one.	
Typical Course of Events:	Actor Action	System Response
	-selects the freelancer they want to hire. -confirms the selection.	-prompts the client to confirm their choice. -notifies the freelancer that they have been hired. -update the project status to "in progress".
Alternate Courses:	-if the client changes their mind before confirming the selection, they can cancel the hire process. -if the freelancer declines the offer, the client can select another freelancer.	
Conclusion:	This use case enables the client to hire a suitable freelancer for their project.	
Post-condition:	The freelancer is notified that they have been hired, and the project status is updated to "in progress".	

Pay freelancer

Use-Case Name:	Pay freelancer	
Use-Case ID:	Pay-freelancer-30	
Priority:	medium	
Primary Actor:	Client	
Description:	This use case allows the client to pay the freelancer for the completed project.	
Precondition:	The client is registered and logged in, and the project has been completed and submitted by the freelancer.	
Trigger:	The client chooses to pay the freelancer.	
Typical Course of Events:	<p>Actor Action</p> <ul style="list-style-type: none"> - selects the project for which payment is to be made. - selects the option to pay the freelancer for the project. - confirms the payment amount and initiates the payment. 	<p>System Response</p> <ul style="list-style-type: none"> - displays the payment amount previously agreed upon during the hiring process. - deducts the payment amount from the client's account balance and adds it to the freelancer's account balance. - sends a notification to the freelancer informing them of the payment and the amount received.
Alternate Courses:	<ul style="list-style-type: none"> -If the payment method fails, the system displays an error message and prompts the client to select a different payment method. -If the freelancer disputes the payment or there is an issue with the completed project, the system notifies both the client and the freelancer to resolve the issue before the payment can be made. 	
Conclusion:	This use case allows the client to easily and securely pay the freelancer for the completed project.	
Post-condition:	The payment is made and the project is closed, with the payment amount deducted from the client's balance and added to the freelancer's balance.	

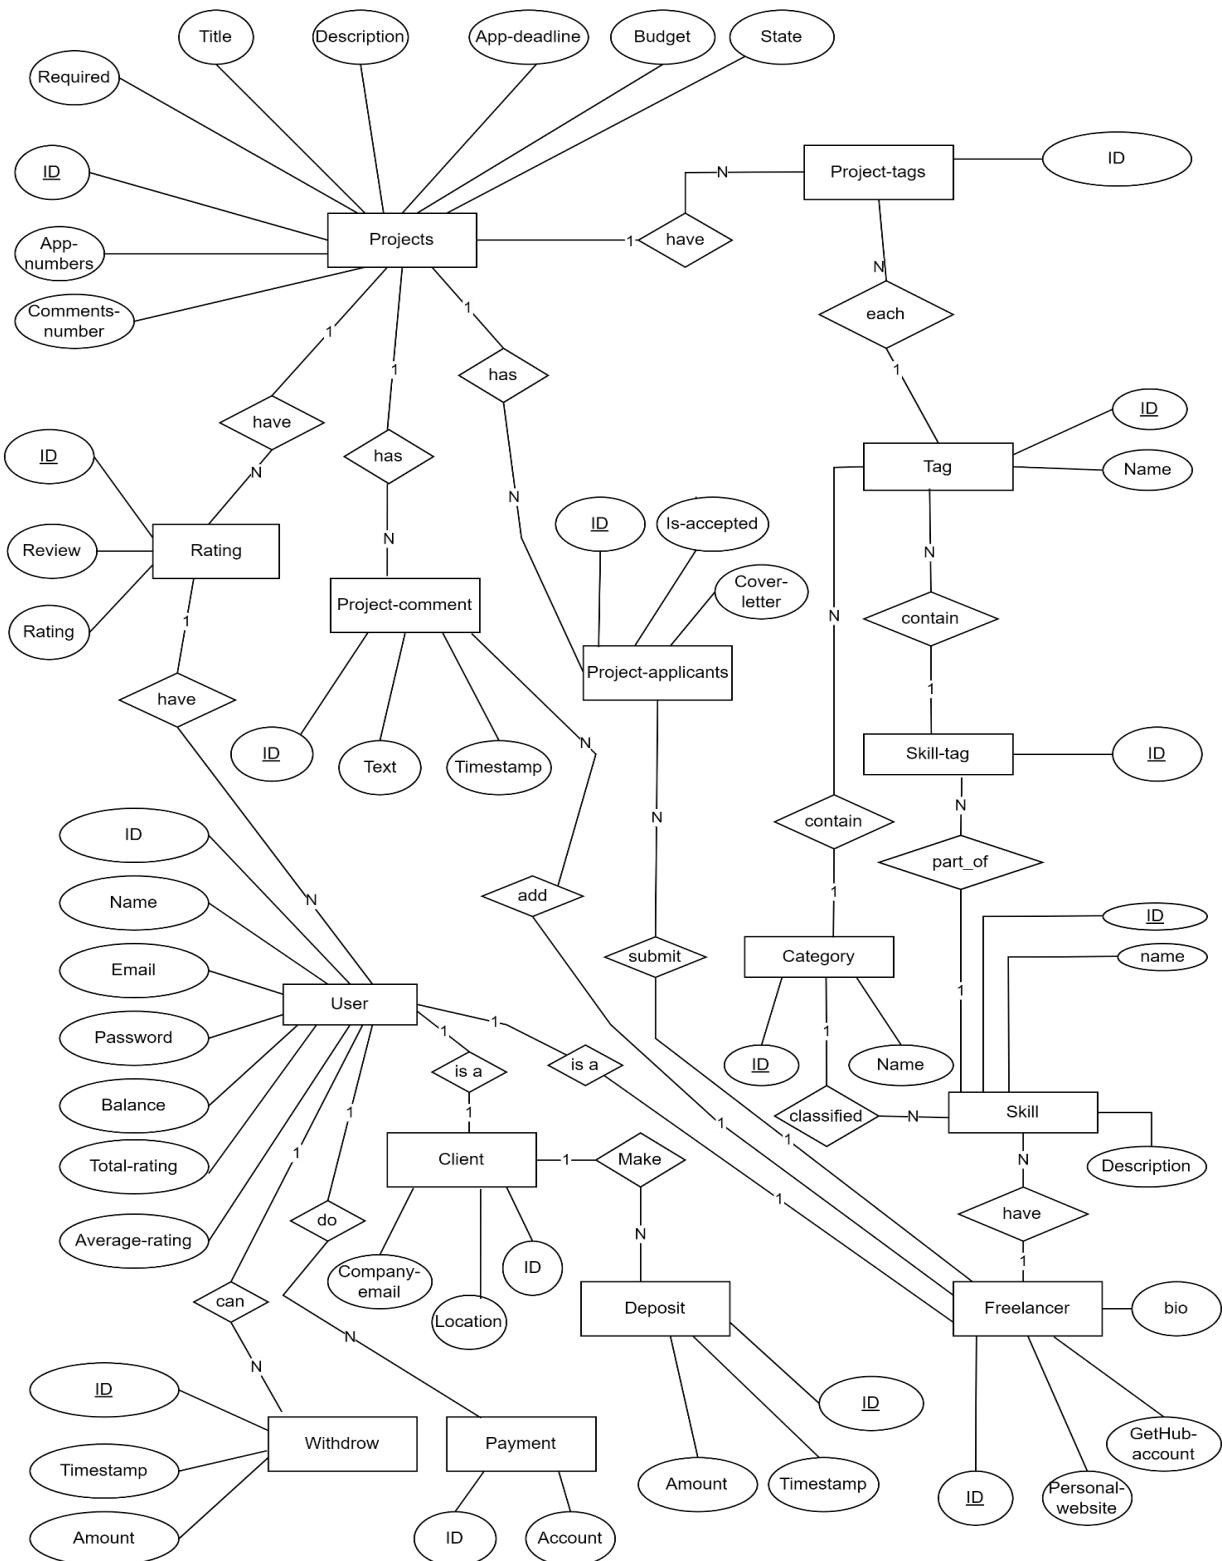

View payment history

Use-Case Name:	View payment history	
Use-Case ID:	View-payment-history-31	
Priority:	medium	
Primary Actor:	Client	
Description:	This use case allows the client to view their payment history on the platform.	
Precondition:	The client is registered and logged in.	
Trigger:	The client selects the "Payment History" option in their account settings.	
Typical Course of Events:	Actor Action	System Response
	- selects a payment from the list to view more details.	- displays a list of all payments made by the client. - displays the details of the selected payment, including the project it was for, the freelancer it was paid to, the amount paid, and the date of payment.
Alternate Courses:	If the client has not made any payments on the platform, the system displays a message indicating no payment history is available.	
Conclusion:	This use case allows the client to easily view their payment history and track their spending on the platform.	
Post-condition:	The client has reviewed their payment history and can exit the payment history or select another payment to view.	

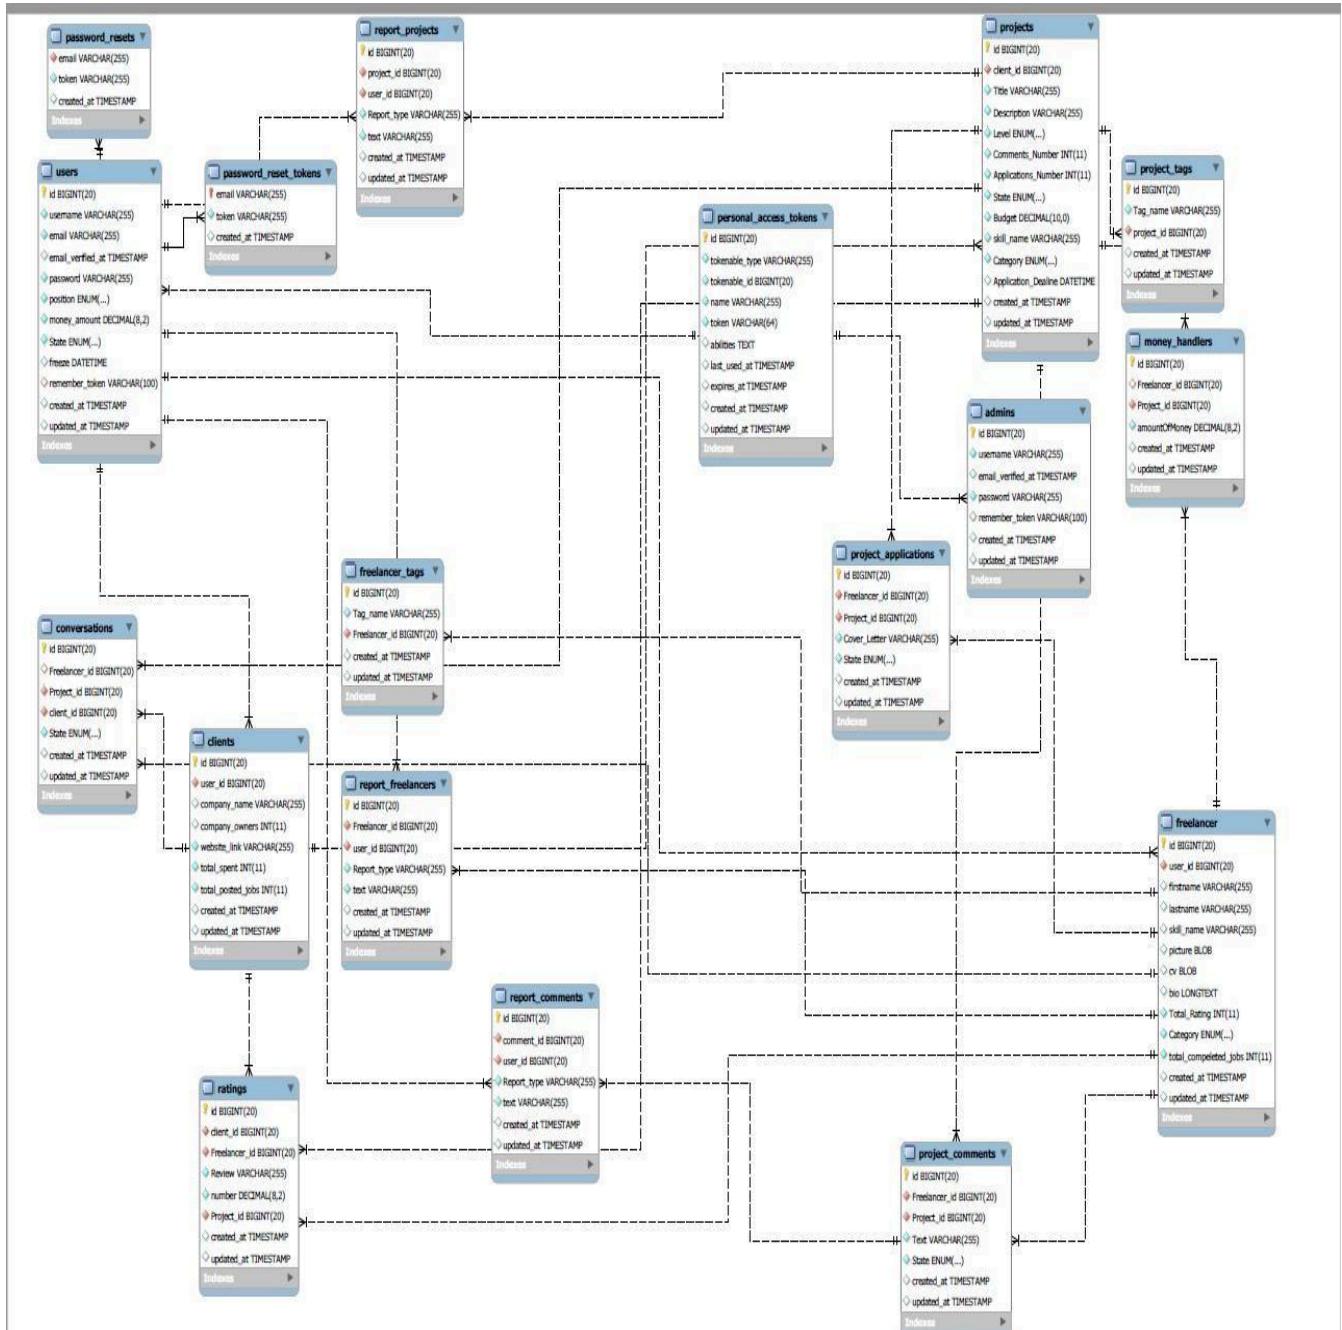

Deposit fund

Use-Case Name:	Deposit fund	
Use-Case ID:	Deposit-fund-32	
Priority:	medium	
Primary Actor:	Client	
Description:	This use case is used to allow the client to deposit fund to their account balance.	
Precondition:	The client is registered and logged in.	
Trigger:	The client chooses to deposit fund to the account.	
Typical Course of Events:	Actor Action	System Response
	-goes to the "Deposit Fund" section.	-displays the available payment method.
	-choose a payment method and enters the deposit amount.	-verifies the payment and updates the client's amount balance.
	-confirms the payment.	-send a confirmation message to the client.
Alternate Courses:	If the payment method is invalid or confirmation fail, the system displays an error message.	
Conclusion:	This use case enables clients to easily deposit fund to their account balance.	
Post-condition:	The client's account balance is updated with the deposited fund.

APPLICATION ACCEPTED: when the client accept freelancer's application

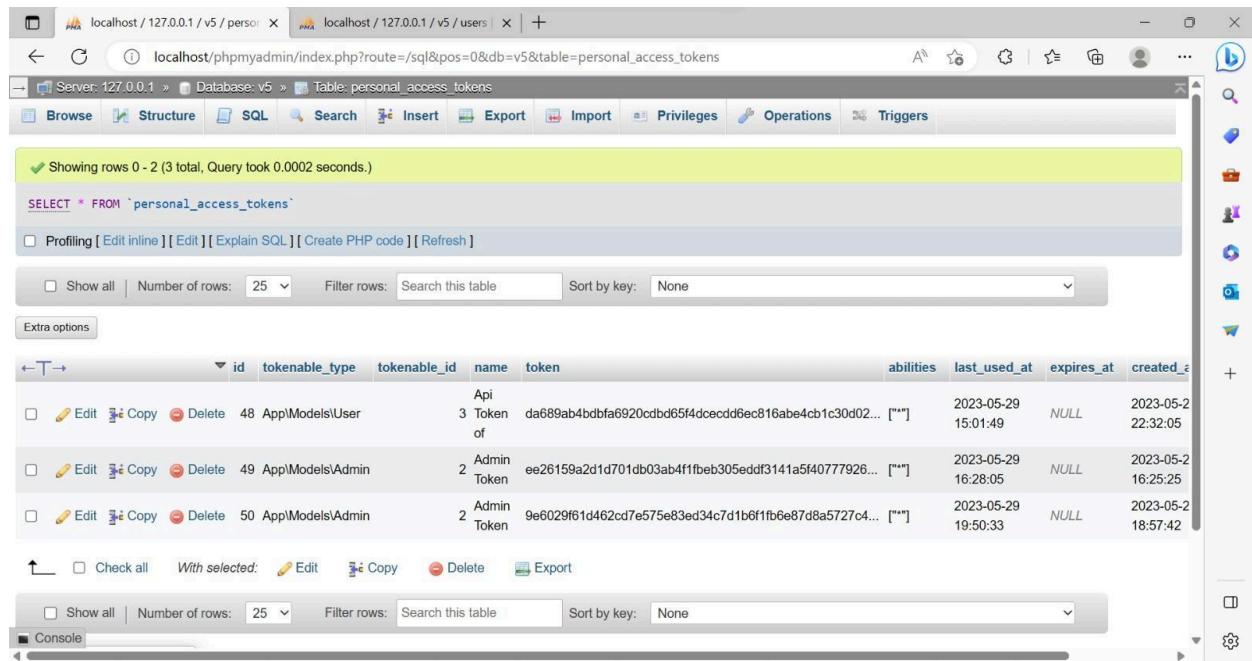

The screenshot shows an email inbox interface with a single new message. The message is from 'Freelancing_Platform <popjoj1234@gmail.com>' to the user. The subject of the email is 'Freelancer Application Accepted'. The email body contains the following text:

Application Accepted

Dear ,
Congratulations! Your application has been accepted for the project. You can now proceed with the project.
Client Company Name: hamza
Contact Email: 82030165@students.liu.edu.lb
now you can contact the client of this project with the email provided.

At the bottom of the email view, there are two buttons: 'Reply' and 'Forward'.

Personal_access_tokens database table: where all the tokens will be stored of each of the two types "admins and users" when a user or an admin login the server generates a token to a specific user or admin and hash it in this table knowing that I can modify the expiration duration as I want and modify every scope of permissions for every user or admin according to their tokens.

The screenshot shows the phpMyAdmin interface with the following details:

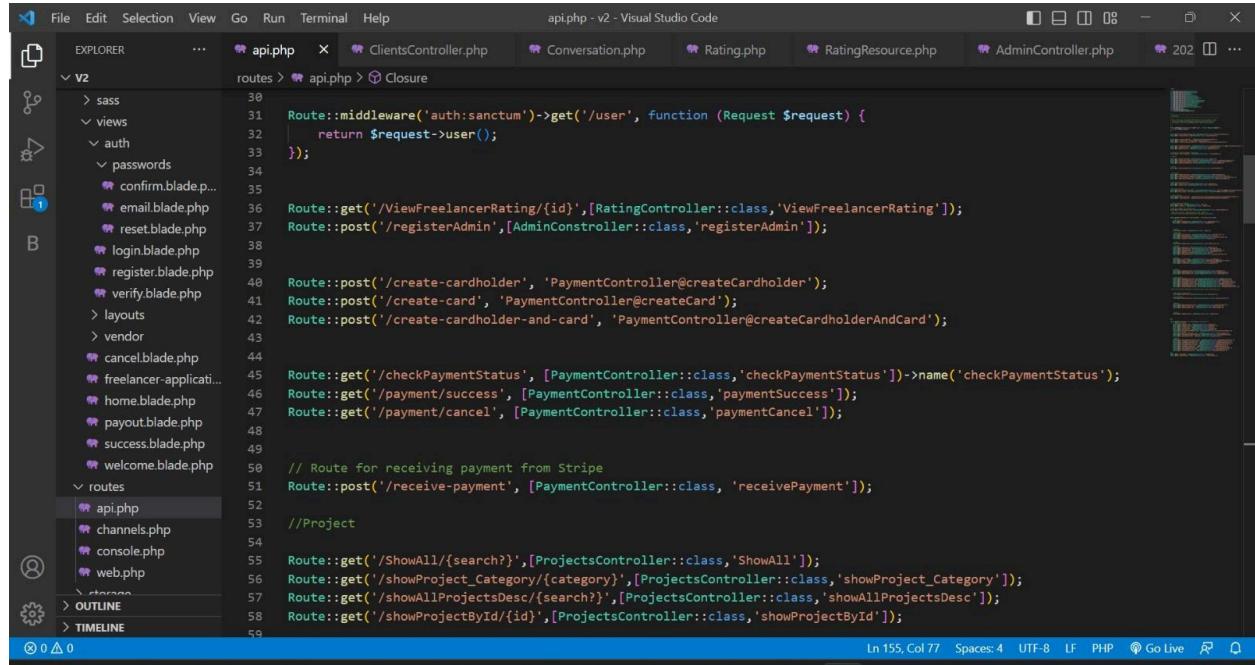

- Server:** 127.0.0.1
- Database:** v5
- Table:** personal_access_tokens

The table structure is as follows:

	id	tokenable_type	tokenable_id	name	token	abilities	last_used_at	expires_at	created_at
<input type="checkbox"/>	48	App\Models\User	3	Api of	da689ab4bdbfa6920cdbd65f4dceccdd6ec816abe4cb1c30d02...	[{"*"}]	2023-05-29 15:01:49	NULL	2023-05-22 22:32:05
<input type="checkbox"/>	49	App\Models\Admin	2	Admin Token	ee26159a2d1d701db03ab4f1fbe305eddf3141a5f40777926...	[{"*"}]	2023-05-29 16:28:05	NULL	2023-05-22 16:25:25
<input type="checkbox"/>	50	App\Models\Admin	2	Admin Token	9e6029f61d462cd7e575e83ed34c7d1b6f1fb6e87d8a5727c4...	[{"*"}]	2023-05-29 19:50:33	NULL	2023-05-22 18:57:42

Below the table, there are buttons for **Edit**, **Copy**, **Delete**, **Check all**, and **With selected:**. There are also links for **Edit**, **Copy**, **Delete**, and **Export**.

Users middleware and some of its routes I can't include all of the routes because they are 72 API.

The screenshot shows the Visual Studio Code interface with the following details:

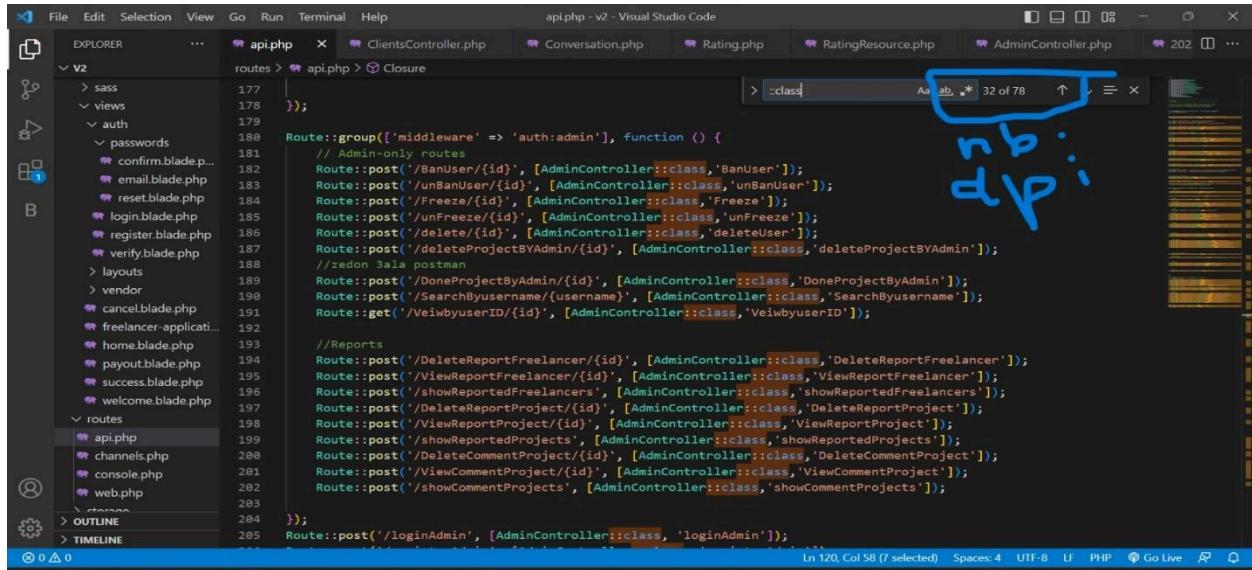

- File Bar:** File, Edit, Selection, View, Go, Run, Terminal, Help.
- Editor:** api.php - v2 - Visual Studio Code. The code is a PHP file containing route definitions for a Laravel application's v2 API.
- Explorer:** Shows the project structure:
 - v2
 - sass
 - views
 - auth
 - passwords
 - confirm.blade.php
 - email.blade.php
 - reset.blade.php
 - login.blade.php
 - register.blade.php
 - verify.blade.php
 - layouts
 - vendor
 - cancel.blade.php
 - freelancer-application.blade.php
 - home.blade.php
 - payout.blade.php
 - success.blade.php
 - welcome.blade.php
 - routes
 - api.php
 - channels.php
 - console.php
 - web.php
 - storage
 - Bottom Status Bar:** Ln 155, Col 77, Spaces: 4, UTF-8, LF, PHP, Go Live, etc.

Admin route: these are the routes of the admin knowing that the middleware is like firewall that prevents the access of any route inside it unless you have its specific sanctum token signature.

sanctum token: it a token of barrier type that used for authentication knowing that it's a built in Laravel.

and these routes are belonging only for the admins.

Knowing that I have done two separated authentication systems in this project one for the admins and other for the users.

The screenshot shows the Visual Studio Code interface with the file 'api.php' open. The code editor displays PHP routes. A blue box highlights the search bar at the top right, which contains the text 'ab'. Below the search bar, the status bar shows 'Ln 120, Col 58 (7 selected)'. Handwritten blue notes are overlaid on the code editor area, with 'nb' and 'dp' written near the search bar.

```

database migrations

The screenshot shows a Visual Studio Code interface with the following details:

- File Explorer:** Shows a tree view of files and folders. The current file is `2023_05_15_090236_create_projects_table.php`. Other visible files include `FreelancerApplicationAccepted.php`, `ProjectApplications.php`, and `2023_05_15_090236_create_users_table.php`.
- Code Editor:** Displays the PHP code for the migration. The code defines a new class `Migration` that extends `Migration`. It contains a `public function up(): void` method which creates a `'projects'` table with columns: `id` (unsigned big integer, foreign key to `client_id`), `Title` (string), `Description` (string), `Level` (enum with values `Beginner`, `Intermediate`, `Expert`), `Comments_Number` (integer, default 0), `Applications_Number` (integer, default 0), `State` (enum with values `Pending`, `Inprogress`, `Done`), `Budget` (integer), `skill_name` (string), and `Category` (enum with values `Development & IT`, `Design & Creative`, `Sales & Marketing`, `Writing & Translation`). The `up` method also sets `Application_Deadline` as nullable and adds timestamps.
- Status Bar:** Shows the current position as Line 26, Column 69, with 4 spaces, in UTF-8 encoding, and LF line endings. There are also buttons for Go Live and a refresh icon.

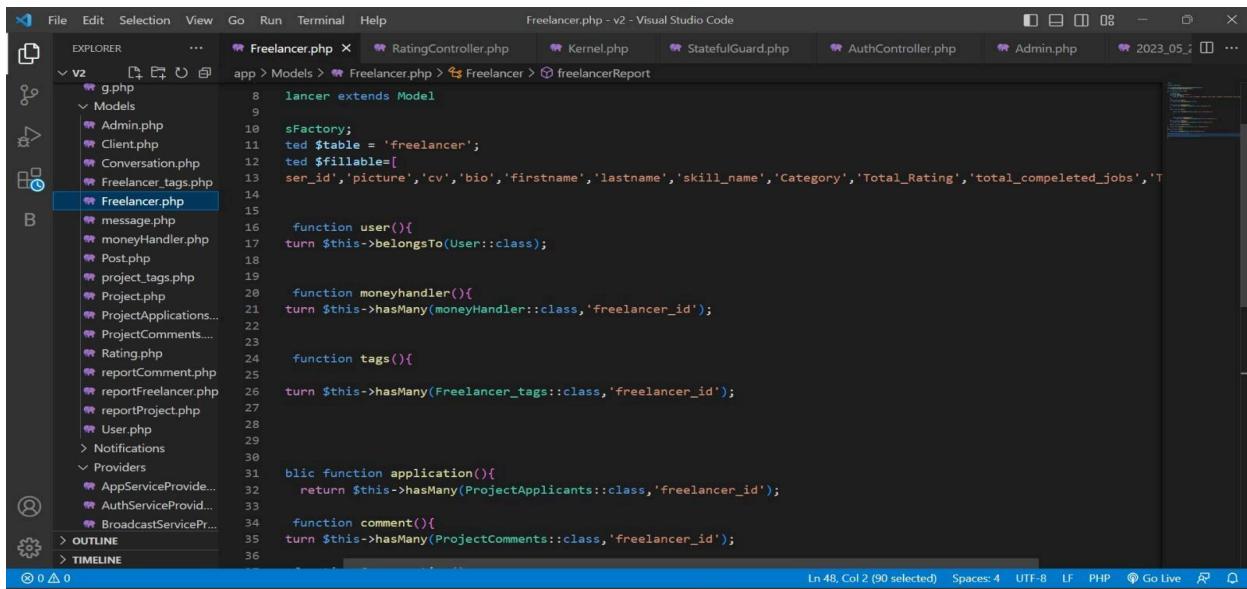

models:

freelancer:

indicates what only filled are allowed to edit them inside the database and make the relations between the database table in it.

I have used eloquent for this.

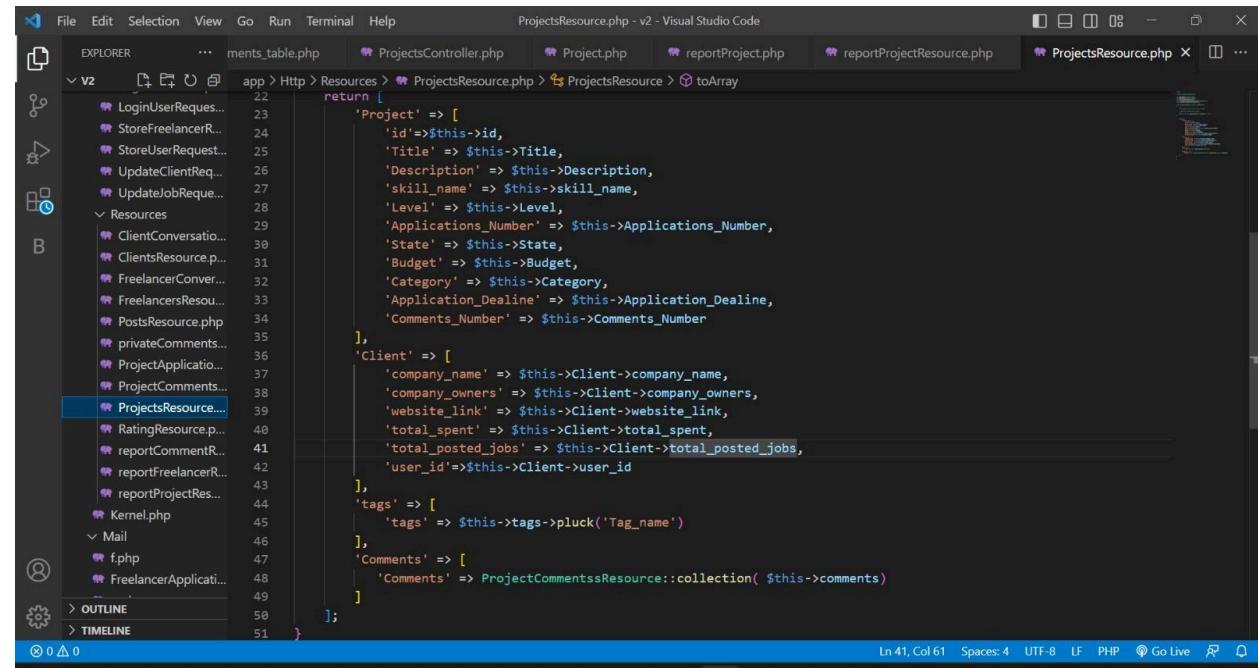

eloquent: an object-relational mapper (ORM) that makes it enjoyable to interact with your database.

Project resources

The screenshot shows the Visual Studio Code interface with the following details:

- File Bar:** File, Edit, Selection, View, Go, Run, Terminal, Help.
- Editor:** ProjectsResource.php - v2 - Visual Studio Code. The code is a PHP function named toArray. It uses a foreach loop to iterate over an array of objects, likely representing projects. Each object is mapped to an array of key-value pairs. The keys include id, title, description, skill_name, level, applications_number, state, budget, category, application_deadline, comments_number, client (with company_name, company_owners, website_link, total_spent, total_posted_jobs, user_id), tags (tags), and comments (Comments). The code also includes a call to ProjectCommentssResource::collection(\$this->comments).
- Explorer:** Shows a tree view of files and folders. The 'Resources' folder is expanded, showing various resource classes like ClientConversation, ClientsResource, FreelancerConversation, FreelancersResource, PostsResource, privateComments, ProjectApplication, ProjectComments, and ProjectsResource. The ProjectsResource class is currently selected.
- Bottom Status Bar:** Ln 41, Col 61 | Spaces: 4 | UTF-8 | LF | PHP | Go Live | Other icons.

Login admin request: requests is in which I indicate what attributes should receive and their types these are made for security to prevents injection to the API as a requests.

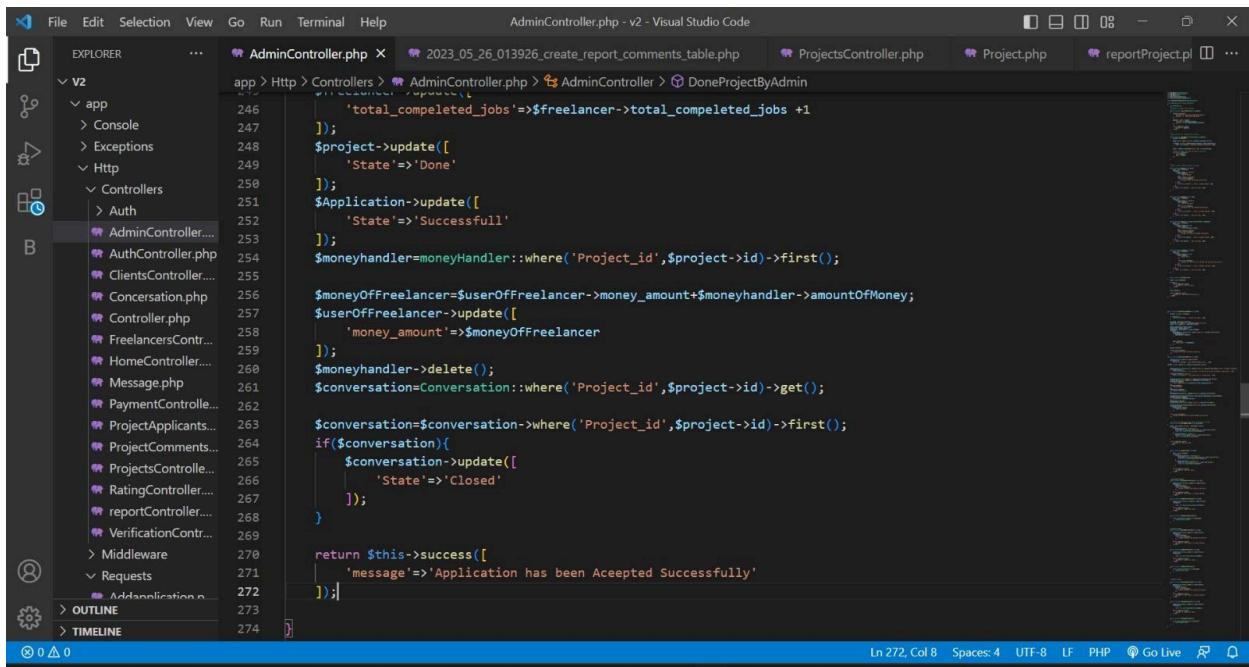

The screenshot shows the Visual Studio Code interface with the file `LoginAdminRequest.php` open. The code is a PHP class named `LoginAdminRequest` that extends `FormRequest`. It contains two methods: `authorize()` and `rules()`. The `rules()` method returns an array of validation rules for the `'username'` and `'password'` fields. The code uses the `Illuminate\Validation\Rules` and `Illuminate\Foundation\Http\FormRequest` namespaces.

Report and reported user: these are the buttons of the user who reports and user reported.

in the left is the user who reports the freelancer and on the right is the reported freelancer.

view project button:

1-showing all project and client of the project details.

2-showing all comments of this project with some of the freelancer info of this comments.

3-with delete project in case if the client is reports that his freelancer is not doing his job well in this case the project will be deleted and the money will be automatically returning from the money handler table to the client account.

4-in the opposite if the freelancer reports that he make all the work and the client is not making the project as done the admin will do it as done by force.

Simply the admin chooses what choice he will do according to the evidence he has.

The screenshot shows a web browser with three tabs open, each displaying project-related information.

- Project Details Tab:** Shows a summary of the project with ID 15. The project title is "website", description is "bla bla bla bla", skill name is "web developer", level is "Beginner", applications number is 0, state is "Done", budget is 2, category is "Development & IT", application deadline is 2023-05-16 22:41:31, comments number is 0, and client is "hamza".
- Client Info Tab:** Shows client statistics: 1 owner, total spent of 34, total posted jobs of 18, website link to www.hamza.com, and tags including php, laravel, angular, bootstrap.
- Project Comments Tab:** Shows a comment section with one entry: "Comment: hhaha" and "Comment State: public". Below this, there is a "User Info" section listing:
 - Freelancer ID: 2
 - First Name: hamzaw221122
 - Last Name: yppp
 - Skill Name: Web developer
 - Username: hamza

At the bottom of the comments tab, there are two buttons: "Delete Project" and "Mark as Done".

Reported by User ID: 3

MANAGE USER:

hamza

hamzaw221122 yppp
Web developer
I am web II

Email: popjoj1234@gmail.com
User State: Banned

User was unbanned successfully.

FROZEN USER: the user frozen time left appears in both user login and admin panel knowing that the admin can increasethetime pf user's freeze if he want.

The screenshot displays two browser windows side-by-side. The left window shows a user login interface with fields for email and password, and a teal 'Login' button. Below the buttons is a link for 'SIGNUP' and another for 'Forgot password'. A pink message box at the bottom states: 'Your account is Frozen for 2 days after'. The right window shows an admin panel for managing users. It has a search bar with 'hamza' and a 'Search' button. A user profile for 'hamzaw221122' is shown, including the name 'yppp', title 'Web developer', and bio 'I am web II'. Below the profile are five buttons: 'View CV' (blue), 'Ban User' (red), 'Freeze User' (yellow), 'Unfreeze User' (teal), and 'Delete User' (red). The 'Freeze User' button is highlighted. The profile also displays the email 'popoj1234@gmail.com', the status 'User State: Available', and a timer 'Time Left for Freeze: 2d 0h 2m 16s'. The taskbar at the bottom of the screen shows various application icons and the date/time '29/05/2023 21:28'.

ban a user: knowing that user can be client or freelancer

The screenshot shows a web application interface. At the top, there is a navigation bar with links for Login, Dashboard, Search (which is active), Reports, and Logout. Below the navigation bar is a search bar containing the text "hamza". A search result card for a user named "hamzaw221122" is displayed. The card includes a profile picture of a dragon, the name "hamzaw221122 yppp", the title "Web developer", and the bio "I am web II". Below the card are four buttons: "View CV" (blue), "Ban User" (red), "Freeze User" (yellow), and "Delete User" (red). The "Ban User" button is highlighted. Below the card, the email "Email: popoj1234@gmail.com" and the user state "User State: Available" are shown. A success message "User was banned successfully." is displayed in a box at the bottom.

This screenshot shows two windows side-by-side. On the left is a "Login" window for "Freelancer" with fields for email ("popoj1234@gmail.com") and password ("....."). It has a teal "Login" button and links for "SIGNUP" and "Forgot password". A pink message box says "Your account is Banned". On the right is a "Search" results page for "hamza", identical to the one in the first screenshot, except the "Ban User" button is now green and labeled "Unban User". The user state is now "Banned". Both windows are running on a Windows 10 desktop, as indicated by the taskbar at the bottom.

ADMIN LOGIN

The screenshot shows a web browser window with the title "ADMIN LOGIN". The address bar displays "localhost:4200/login". Below the address bar, there is a navigation menu with links: "Login" (which is currently active and highlighted in blue), "Dashboard", "Search", "Reports", and "Logout". The main content area is titled "Login". It contains two input fields: "Username" with the value "hamza" and "Password" with the value "*****". Below the inputs is a blue "Login" button. A message box is displayed below the button, stating "Invalid username or password. Please try again." To the right of the browser window, there is a vertical toolbar with various icons.

Login

hamza

Password

Login

Invalid username or password. Please try again.

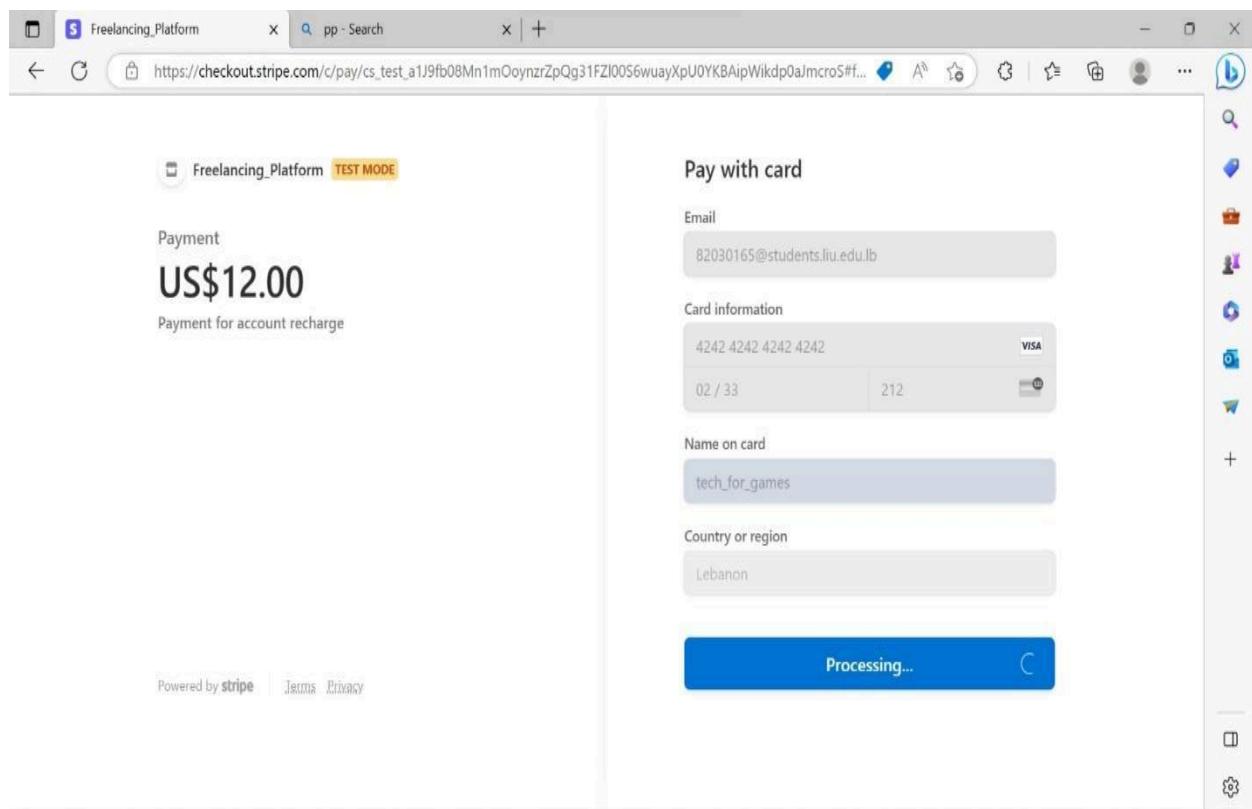

admin login dashboard

A screenshot of a web browser window titled "AdminDashboard". The URL in the address bar is "localhost:4200/dashboard". The browser has several tabs open, including "Stripe Checkout", "pp - Search", "New tab", "localhost / 127.0.0.1", "default cv - Bing", and "AdminDashboard". The main content area shows a navigation bar with links for "Login", "Dashboard" (which is highlighted in grey), "Search", "Reports", and "Logout". Below the navigation bar, a success message box displays the text "Login successfully." The right side of the screen features a vertical toolbar with various icons for file operations like copy, paste, find, and search.

search by username

A screenshot of a web browser window titled "AdminDashboard". The URL in the address bar is "localhost:4200/search". The browser has several tabs open, including "Stripe Checkout", "pp - Search", "New tab", "localhost / 127.0.0.1", "default cv - Bing", and "AdminDashboard". The main content area shows a search interface with a search bar containing the text "yh". Below the search bar, a user profile card is displayed for a user named "hamzaw221122 yppp". The card includes a small profile picture of a dragon, the user's name, their occupation "Web developer", and the text "I am web ||". Below the card are four buttons: "View CV" (blue), "Ban User" (red), "Freeze User" (yellow), and "Delete User" (red). At the bottom of the card, the user's email is listed as "Email: popoj1234@gmail.com" and their user state is "User State: Available". The right side of the screen features a vertical toolbar with various icons for file operations like copy, paste, find, and search.

STRIP: this is the credit card that stripe gives me to test on non-real money

HOW STRIPE WORK:

A screenshot of a web browser displaying a Stripe payment interface. The URL in the address bar is https://checkout.stripe.com/c/pay/cs_test_a1J9fb08Mn1mOoynrzpQg31FZl00S6wuayXpU0YKBAipWikdp0ajmcroS#f.... The page title is "Freelancing_Platform". A "TEST MODE" button is visible. The payment amount is "US\$12.00" for "Payment for account recharge". The "Pay with card" section shows an email input field containing "82030165@students.liu.edu.lb". A card information input field contains "4747 4747 4747 4747". Below it, the expiration date is "02 / 33" and the CVV is "212". A message states: "Your card was declined. Your request was in test mode, but used a non test card. For a list of valid test cards, visit: https://stripe.com/docs/testing." The "Name on card" field contains "tech_for_games". The "Country or region" dropdown is set to "Lebanon". A large blue "Pay" button is at the bottom.

A screenshot of a web browser displaying a payment success confirmation page. The URL in the address bar is 127.0.0.1:8000/success. The page title is "Payment Success". The main content is "Payment Successful". Below it, a message says "Thank you for your payment!".

costumer info in stripe: customer payment summary knowing that I am not using any of these info to authenticate the users payment am using sanctum token and user id for these using local webhook between my local host and stripe to retrieve the payment data and ensure it.

The screenshot shows the Stripe Payments dashboard with a single payment listed. The payment details are as follows:

Payment details	
Statement descriptor	FREELANCING WEB PLATFO
Amount	\$12.00
Fee	\$0.65
Net	\$11.35

FUNDS TRANSFER: when accepting an application the money will be taken from client account and handle it in money handler then when the client turn the project to be done the money will be transferred from the money handler to the freelancer account.

The screenshot shows the phpMyAdmin interface for a MySQL database named 'v5'. The current table is 'money_handlers'. The SQL query at the top is:

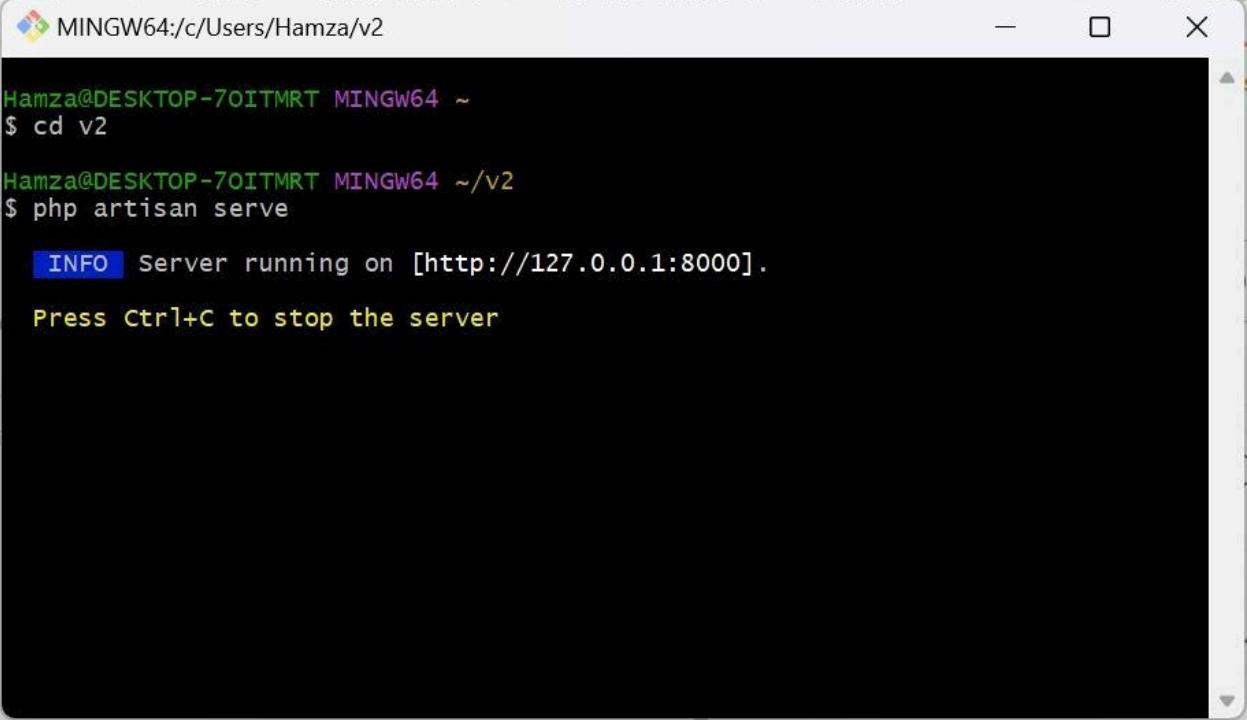

```
SELECT * FROM `money_handlers`
```

The table has the following columns and data:

	id	Freelancer_id	Project_id	amountOfMoney	created_at	updated_at	
<input type="checkbox"/>	Edit Copy Delete	15	2	16	2.00	2023-05-26 13:56:40	2023-05-28 22:32:39
<input type="checkbox"/>	Edit Copy Delete	16	2	17	2.00	2023-05-28 22:34:51	2023-05-28 22:35:25

Below the table, there are buttons for 'Check all', 'With selected:', 'Edit', 'Copy', 'Delete', and 'Export'. There are also buttons for 'Print', 'Copy to clipboard', 'Export', 'Display chart', and 'Create view'.

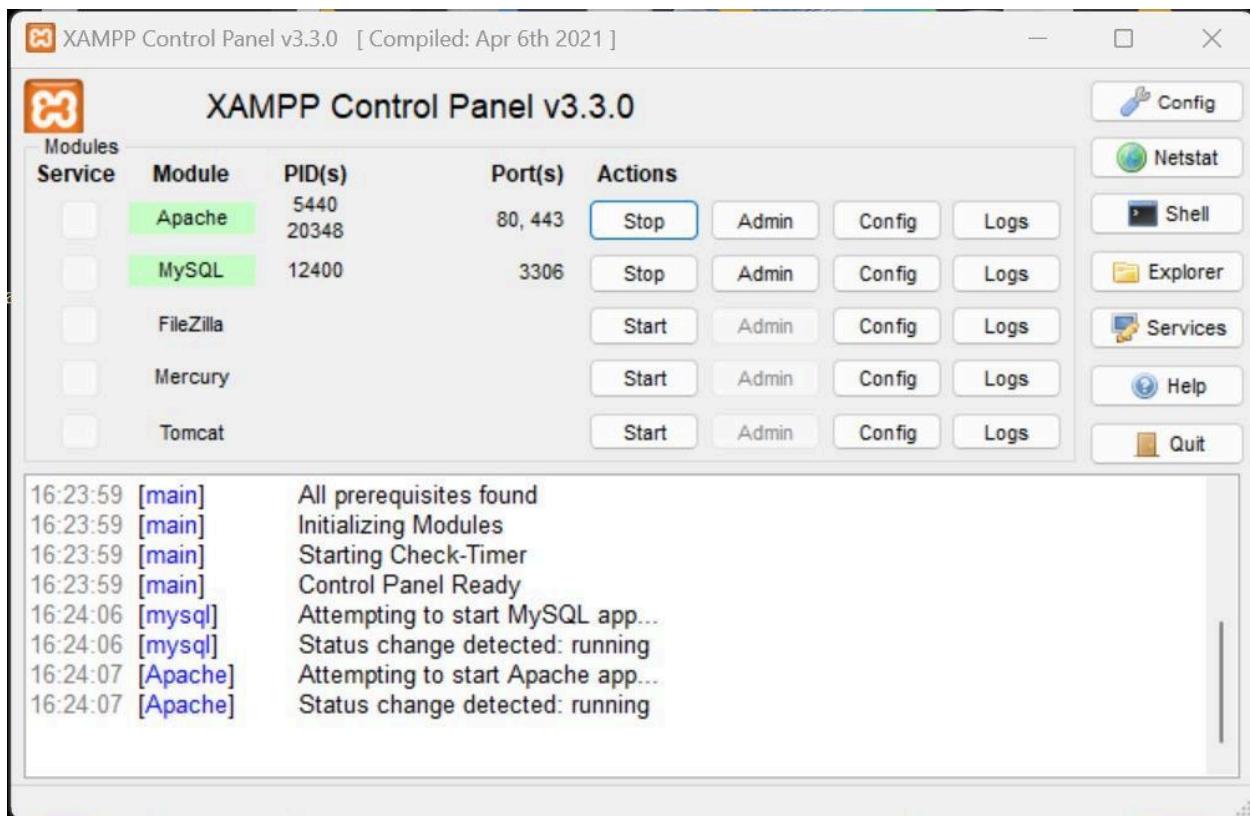

LOCAL HOST SERVER: making local host server for Laravel

A screenshot of a terminal window titled "MINGW64:/c/Users/Hamza/v2". The window shows the following command-line session:

```
Hamza@DESKTOP-7OITMRT MINGW64 ~
$ cd v2
Hamza@DESKTOP-7OITMRT MINGW64 ~/v2
$ php artisan serve
INFO Server running on [http://127.0.0.1:8000].
Press Ctrl+C to stop the server
```

XAMPP: using XAMPP as local host database for MySQL.

POSTMAN: using postman to test the API'S

The screenshot shows the Postman application interface. At the top, there are navigation links: Home, Workspaces, API Network, and Explore. The search bar contains "Search Postman". On the right side of the header, there are icons for Invite, Share, Fork, Run, Save, and Upgrade. Below the header, the main area shows a collection named "Admin". The left sidebar lists "Collections" (with "dfd" selected) and "Environments". The "dfd" collection contains several API endpoints under the "Admin" category, such as "POST Login Admin", "POST Register Admin", "POST Band A User", etc. The "Overview" tab is selected in the top navigation of the main content area. The right side of the screen displays details about the collection, including "Created by You" and "Created on 24 May 2023, 3:31 AM". At the bottom of the interface, there are buttons for Runner, Capture requests, Cookies, Trash, and Help.

USER TABLE:

I have hashed all the passwords of all the database tables

The screenshot shows the phpMyAdmin interface for a MySQL database named 'v5'. The current table is 'users'. The page displays two rows of data:

	Edit	Copy	Delete	id	username	email	email_verified_at	password	position	money_amoour
<input type="checkbox"/>	Edit	Copy	Delete	2	hamza	popoj1234@gmail.com	2023-05-24 18:58:30	\$2y\$10\$YmNjbFJNPOZvdMXlx3PiWenuU/une3bWjic3Viy6e/P...	freelancer	0
<input type="checkbox"/>	Edit	Copy	Delete	3	tech	82030165@students.liu.edu.lb	2023-05-24 19:02:38	\$2y\$10\$P0dQrkBmpwyJb.FrmOlqyext1MLgUwB5TXsMQGMVrbl...	client	12

Below the table, there are buttons for 'Check all', 'With selected:', 'Edit', 'Copy', 'Delete', and 'Export'.

At the bottom of the interface, there are tabs for 'Console', 'Copy to clipboard', 'Export', 'Display chart', and 'Create view'.
